

1. DECLARE INTENT

One approved
architecture contract

Approved contract M
architecture.yaml

Validate contract
schema + semantic checks

Expected architecture
 G_E + rules R +
model evidence

2. OBSERVE CHANGE

Base snapshot and affected head components

BASE SNAPSHOT
Git base S_b
committed tree

Full AST scan
cached observed graph
 $G_b = A(S_b; M)$

**PROPOSED
CHANGE**
Git diff $S_b \rightarrow S_h$
paths + hunks

**Incremental
AST scan**
supplied model M ;
affected components
 G_h with source
evidence

3. COMPARE AND GATE

Only introduced findings control the PR

Evaluate base and head
 $F(M, G_b)$ versus $F(M, G_h)$

Introduced finding set
 $F^+ = \{f \in F_h : k(f) \notin K_b\}$
Linked source/model evidence

PASS
no new
finding

BLOCK
